To read **The Application of Graphics and Other Methods to the Design of Structures, Specially Prepared for the Use of Engineers (Paperback)** PDF, please click the hyperlink listed below and save the document or have access to additional information that are relevant to THE APPLICATION OF GRAPHICS AND OTHER METHODS TO THE DESIGN OF STRUCTURES, SPECIALLY PREPARED FOR THE USE OF ENGINEERS (PAPERBACK) book.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: . wind may blow from left to right, or from right to left, and we must consider each case in turn. The slope of the panel E P, fig. 68, is 55 deg., that of F Q 37 deg., and that of S G 19 deg. Then, assuming the maximum wind pressure to be 56 lb. per square foot, the normal pressures per square foot upon the above panels, obtained from fig. 60, or equation (86), are 491b., 391b., and 231b. respectively. The total panel loads due to wind pressure are 2 tons, 1-58 ton, and -93 ton respectively; and after dividing them up between their joints and finding the resultants by the parallelogram of forces, we have D E = 1 ton, EF = 165 ton, F G = 116 ton, and G H = 46 ton in the direction there shown. The supporting forces must next be found. The line of loads d, e, f, g, h is set down parallel and equal to the loads D E, E F, F G, and G H, fig. 66 (in the stress diagram the scale is double of that used for the loads in the upper part of the diagram). The left-hand end is assumed to be anchored down to the supporting structure, whatever it might be, and the right-hand end is free to move horizontally; consequently the direction of the reaction there must be vertically upwards. In roofs of considerable length the free end is mounted on rollers or a...
