

Mechanical Identifiability in Automotive Engineering (Paperback)

Filesize: 5.7 MB

Reviews

Here is the greatest publication we have read until now. I could possibly comprehend every little thing using this written e publication. I am just easily could possibly get a satisfaction of looking at a written book.

(Milo O'Hara)

MECHANICAL IDENTIFIABILITY IN AUTOMOTIVE ENGINEERING (PAPERBACK)

Derc Publishing House, United States, 2015. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.It is a great pleasure to introduce this important technical book, which presents many new ideas and contributions regarding the identifiability of mechanics in automotive engineering. The author, Professor Dr. Eng. Math. Sorin VLASE is a well-known European academic, with a rich and diverse teaching, research and management accomplishments. He organized many international conferences and seminars, including five International Conferences Advanced Composite Materials Engineering, five International Conferences Computational Mechanics and Virtual Engineering, and three International Conferences Research Innovation in Engineering. At several of these Conferences the Chairman was the internationally renowned Professor Dr. Eng. Yasushi NIITSU, Tokyo Denki University, Tokyo, Japan. Mechanical and automotive engineering have a long history, and renowned mechanical engineers and inventors were, for example, the ancient Greek mathematician Archimedes ((circa 287 BC, Syracuse, Sicily, Magna Graecia - 212 BC, Syracuse, Sicily, Roman Republic), Golden Crown, Archimedes Screw, Claw of Archimedes), Italian painter and inventor Leonardo da Vinci ((1452, Vinci, Italy - 1519, Amboise, France), Armored Car, Flying Machine, Helical Air Screw), German engineer Karl Benz ((1844 - 1929, Germany), founded Mercedes-Benz), German inventor Rudolf Diesel ((1858, Paris, France - 1913, English Channel), diesel engine), American industrialist Henry Ford ((1863 - 1947 USA), cars in Ford Motor Company), Italian entrepreneur Ferruccio Lamborghini ((1916 - 1993, Italy), created Automobili Lamborghini), and many others. The universality of this book is given by its attractive presentation of many new results, focusing on various aspects of mechanical engineering applied to automotive engineering, from elastodynamic analysis of multibody systems using finite element method, to composite materials used in automotive engineering, and from mechanical systems with symmetries and their applications in automotive engineering, to kinematical analysis of the multibody...
