Find the value of $\log_2 8$, $\log_2 6$, $\log_1 243$, $\log_5 04$, $\log_{10} 1000$, $\log_{10} 001$. 5. Find the value of $\log_a 1$, $\log_b V$, $\log_2 2$, $\log_7 3$, $\log_{10} 10$. y6. Prove that $\log Cvx VT - 9) \log_2 \log 7 - \log 3$. 121. That system of logarithms whose base is 10 is called the common system of logarithms. In speaking of logarithms hereafter, common logarithms are referred to unless the contrary is expressly stated. We shall assume that an index of 10 can be found such that 10 affected with this index is practically equivalent to any number. The indices of these powers of 10, i. e. the common logarithms, are in general incommensurable numbers. Now, the greater the index with which 10 is affected, the greater will be the value of the equivalent expression; and the less the index, the less will be the numerical value of the expression. Hence, if one number be less than another, the logarithm of the first will be less than the logarithm of the second. But the student should notice that logarithms (or indices) are not proportional to the corresponding numbers. Example. 1000 is less than 10000; and the logarithm to base 10 of the first is 3 and of the second is 4. But 1000, 10000, 3, 4 are not in proportion. 122. Proposition. If two numbers expressed in the decimal notation have the same digits arranged in the same order (so that they differ only...
