Springer. Paperback. Book Condition: New. Paperback. 500 pages. Dimensions: 9.2in. x 6.1in. x 1.2in. These proceedings contain most of the papers that were presented at the Second International Conference on Language and Automata Theory and Applications (LATA 2008), held in Tarragona, Spain, during March 13-19, 2008. The scope of LATA is rather broad, including: words, languages and automata; grammars (Chomsky hierarchy, contextual, multidimensional, union, categorical, etc.); grammars and automata architectures; extended automata; combinatorics; words; language varieties and semigroups; algebraic language theory; computability; computational, descriptive, and parameterized complexity; decidability questions on words and languages; patterns and codes; symbolic dynamics; regulated rewriting; trees, tree languages and tree machine rewriting; graphs and graph transformation; power series; fuzzy and rough languages; cellular automata; DNA and other models of bio-inspired computing; quantum, chemical and optical computing; biomolecular nanotechnology; automata and logic; algorithms on automata and words; automata for system analysis and program verification; automata, concurrent and Petri nets; parsing; weighted machines; transducers; foundations of finite state technology; grammatical inference and algorithmic learning; text retrieval, pattern matching and pattern recognition; text algorithms; string combinatorial issues in computational biology and bioinformatics; mathematical evolutionary genomics; language-based cryptography; data and image compression; circuits and works; language-theoretic foundations of artificial intelligence and artificial digital libraries; and document engineering....

A top quality publication along with the font used was intriguing to read. I really could comprehend everything using this written ebook. It's been designed in a remarkably straightforward way and it is only after I finished reading through this publication by which basically altered me, modify the way I believe.
